Education

B.S. Computer Science and Engineering - The Ohio State University — Columbus, OH

Selected Experience

Discover Financial Services — Chicago, IL
Application Engineer — Sep 2023 - Present

- For the transmission of data to strategic partners, I perform a mix of Platform, Cloud, and Data Engineering work. (Python, K8/Kubernetes, HCL, Bash)
- Develop automated workflows in AWS, e.g. an automated data pipeline for uploading and querying to a partner's clean room. (AWS Lambda, SQS, Step Functions)
- Improve observability, monitoring, and alerting within our Kubernetes cluster to mitigate and rebound from failure scenarios. (K8s event monitoring/incident creation and DataDog dashboards)
- Deliver solutions taking into consideration an evolving cybersecurity landscape and red tape challenges.
- Deployed Production Infrastructure via Terraform in conjunction with Ansible Tower. Deployed using CloudFormation as well.

Outlier AI — Remote
Software Engineer - AI Training — Apr 2024 - Jun 2024

- To train GPT 4.0 and ChatGPT from OpenAI, I wrote specialized, ideal code; in JavaScript, in Python, in Go, in C#, in HCL, and in Java, for a wide range of software problems across domains (in instances where the LLM had hallucinated).
- I worked here because I care, and I want AI to be trained correctly and produce quality code.
- Refined and optimized code generated by LLMs via Reinforcement Learning through Human Feedback (RLHF training).
- Evaluated and assessed the quality and effectiveness of prompt responses with a discerning eye for content relevance, coherence, and tone.

Epsilon — Chicago, IL
Associate Client Integration Engineer — Jun 2021 - Sep 2023

- Through code optimization, attained 90% improvement in speed of live data availability alongside a 35% reduction in server resources.
- Rebuilt, from the ground up, an ETL in Python of daily customer dimension data (20M Rows), reducing runtime from 2 hours to 15 minutes for 20M rows.
- Reduced weekly support team time costs by more than 88% (1.5 hours to 10 minutes) for a critical workflow on the largest revenue-producing client in the vertical. I automated that workflow, and I improved and fixed a broken service which grabs postal codes in a radius around a geo location.

Selected Projects

Agentic Workflow - Weatherman AI Agent — 2025 - https://github.com/lycoris11/ai-agent
Developed an Agentic workflow to fully automate the creation of weather news videos, including: Retrieving a 7-day forecast; Generating news scripts; Creating background images displaying daily highs/lows, conditions, and icons; Producing videos featuring a virtual presenter in front of dynamically generated weather graphics. This project demonstrated the potential of AI to handle unbiased news segments such as weather reports.

Tech Stack: Golang, Python, WeatherAPI, GPT 4.1, HeyGen AI, Docker, EC2

Hirewise AI — 2023 - https://github.com/lycoris11/hirewise-ai
An AI tool that leverages OpenAI's LLM to compare resumes against job descriptions; helping recruiters find the ideal candidate. Recruiters can upload the candidate's resume PDF and find the best match for the job. I was building GPT wrappers before it was cool.

Tech Stack: React (Next.js), Tailwind, API Gateway, Lambda, S3, and RDS (Serverless Aurora PostgreSQL)

Skills

Languages:	Go, Python, Java, HCL, JavaScript, HTML, Ruby, SQL, PostgreSQL, Bash, C#
Frameworks and Libraries:	Node.js, React, Next.js, Tailwind, CSS
Tools:	Git, Linux, AWS, HashiCorp(Vault, Terraform), Jira, CI/CD, Docker, Kubernetes OCP / OpenShift

Selected Certifications

AWS Certified Solutions Architect – Associate (SAA) — AWS
Credential ID: ba3c4e05232a49bda3b09df3ae12028f — Apr 2024
